PROFESSIONAL SUMMARY

Senior Cloud / DevOps Engineer with **6+ years of experience** designing, migrating, and operating **secure, scalable AWS platforms**. Strong expertise in **multi-account AWS architecture, Terraform-based infrastructure, CI/CD automation, cost optimization, and production reliability**. Proven track record of **30–40% cost savings**, **zero-downtime migrations**, and **automation that significantly reduced efforts**. Production-focused, and comfortable owning Projects and complex cloud systems end to end.

Certification:

- **AWS Solution Architect Associate.**
- **HashiCorp Certified: Terraform Associate (003)**
- **Certified Kubernetes Administrator**

AWS:-

- Cognitive about designing, deploying, and operating highly available, scalable and fault tolerant systems using Amazon Web Services (AWS). Adaptive to AI and Cloud Strategies.
- Designed and managed AWS CloudFront distributions with custom caching behaviors, origin failover, TLS certificates, and geo-restrictions.
- Implemented AWS WAF rules for OWASP threats, bot mitigation, IP whitelisting, and rate limiting.
- Integrated AWS Shield (DDoS protection) for edge-layer security of public applications
- Implemented centralized logging, monitoring, and alerting using CloudWatch, CloudTrail to meet audit and compliance requirements.
- Built secure VPC architectures with private subnets, NAT gateway, Transit Gateway and VPC Peering for multi-account connectivity.
- Managed AWS Batch ETL pipelines running multiple jobs per day to ingest MySQL data into S3.
- Optimized cloud resource utilization through autoscaling and right-sizing initiatives.
- Worked on Terraform to deploy large and diverse resources, Debugging the Terraform script.

Career Profile

Current Experience and Current Role: -Senior Cloud Operations Engineer
Company: - ToTheNew
7-July-22 to Present.
Projects:- HDFC MutualFund, concealedcoalition, countrywideconcealed, americanservicepets.

Role and responsibilities:

- Led application migrations from on-prem to AWS with zero customer-facing downtime.
- Built secure VPC architectures with private subnets, NAT gateway, VPC endpoints, and Transit Gateway/VPC Peering for multi-account connectivity.
- Designed and managed AWS CloudFront distributions with custom caching behaviors, origin failover, TLS certificates, and geo-restrictions.
- Implemented AWS WAF rules for OWASP threats, bot mitigation, IP whitelisting, and rate limiting.
- Integrated AWS Shield (DDoS protection) for edge-layer security of public applications
- Implemented centralized logging, monitoring, and alerting using CloudWatch, CloudTrail to meet audit and compliance requirements.
- Implemented ML Based autoscaling strategies for Compute workloads for 30–40% reduction in compute costs.
- Automation for various tasks through AWS System Manager like Patching, Package installations, Compute Start Stop and other various tasks.

`

- Automated infrastructure provisioning and changes using Terraform, to reduce manual efforts and configuration drift.
- Implemented CloudWatch and other monitoring tools for Monitoring and for task automation, Auto scaling, Scheduling triggers for Lambda functions and other services.
- Actively handled production incidents and root-cause analysis, including performance bottlenecks, rogue processes, and cost anomalies.
- Implemented security best practices including IAM least privilege, MFA, KMS-based encryption, CloudTrail, AWS Config, and Inspector.
- Orchestrated secrets management and key lifecycle via AWS Secrets Manager, Azure Key Vault, and integrated them with CI/CD pipelines.
- Built and maintained CI/CD pipelines (Jenkins + Docker + ECR), accelerating release cycles and improving deployment reliability.
- Worked on Prometheus and Grafana dashboards for infrastructure, application, and custom metrics with proactive alerting.

KEY ACHIEVEMENTS:-

- **Achieved 30–40% compute cost savings** by implementing **AI-driven autoscaling** across production compute workloads.
- **Led zero-downtime migration of a full Business Unit across Production and Staging environments, handling networking, data, and application cutover.**
- **Implemented ML-assisted autoscaling recommendations combined with CloudWatch metrics to optimize compute capacity, reducing costs by 30-40%.**
- **Automated CI/CD pipelines for Dockerized applications, reducing manual deployment effort by 60-70% and improving release consistency across environments.**
- **Implemented Prometheus and Grafana for infrastructure and application monitoring, including custom metrics, alerting, and dashboards for production workloads. Outcome:Improved incident detection and reduced mean time to detection (MTTD) through proactive alerting.**
- **Designed and operated a multi-account AWS architecture (5+ accounts) using AWS Organizations, Control Tower, and Transit Gateway with centralized security and networking.**

TECHNICAL SKILLS:

Cloud Technologies	Amazon Web Services
Monitoring	CloudWatch, Site24x7, Grafana, Prometheus, Datadog
Operating Systems	Windows, Ubuntu, Linux
Container Management	Docker
Version Control Systems	Git
Ticketing Tools	ServiceDesk and BMC Remedy, Jira
Automation Tools	Jenkins, GitHub Actions
AI Productivity Tools	GitHub Copilot, Google Gemini (for code generation, infrastructure documentation, and secure scripting)
IaC tool	Terraform

cloudxchange.io

Senior Cloud Operations Engineer
Cloudxchange.io (NSEIT) | Feb 2020 – Jul 2022

Key Responsibilities & Impact

- Supported banking-grade AWS infrastructure for Kotak Mahindra Bank, focusing on security, reliability, and compliance.
- Migrated data from on-prem databases to AWS S3, enabling analytics using Athena and Glue ETL jobs.
- Implemented secure networking architectures using VPC isolation, private subnets, NAT Gateways, and VPC endpoints.
- Worked extensively with AWS KMS to enforce encryption standards for data at rest.
- Automated operational tasks using AWS Systems Manager, including patching, package installation, and scheduled maintenance.
- Deployed and operated EKS clusters, configuring ingress, autoscaling (HPA), and readiness/liveness probes.
- Used Terraform to provision and manage AWS infrastructure, improving consistency across environments.

`

- Managed Linux systems (Ubuntu, RHEL), including disk/LVM management, patching, and performance troubleshooting.

EDUCATION / ACADEMIC: -

1) Completed Bachelor of Computer Administration from Sunrise University in 2019.
2) Completed 12th from CBSE Board in 2016.
3) Completed 10th from CBSE Board in 2014.

Sincerely,

Ashish Soni (DATE: _____)
